

Lab Practice #1 (Group 9) Otar Jintchveladze

1. What is NetBeans?
 - Code editor (We write/debug code)
 - Project Management (organized Java files nicely)
 - Built-In Compiler(Allows us to run)
2. How to install & set up NetBeans?
 - Make sure you have Java Development Kit (JDK, 17 <=)
 - NetBeans IDE.
3. Installation process
 - Oracle JDK Download (for jdk)
 - Verify installation in cmd/terminal and type **java -version**
 - If it is installed it will show the version.

How to create & run a java program in NetBeans?

1. STEP 1
 - a. Click File -> New Project
 - b. Java Ant/Maven -> Java Application -> Click Next
 - c. Name your project
 - d. Uncheck Create Main class (we will create it manually)
 - e. Click Finish.
2. STEP 2
 - a. Inside the projects panel (left side), right-click on *Source Packages* -> *New* -> *Java Class*.
 - b. Name it main.
 - c. Click finish.
3. STEP 3
 - a. Add java **main(String[] args)** method, and print something basic.
 - b. Click the green triangle and run it.
 - c. If you see the print statement, congratulations you successfully made it!

What is an ArrayList?

- Resizable array (can grow and shrink dynamically).
- Unlike normal arrays they don't have size.

Simple & Useful Methods:

- **add()**
- **get(index)** (Accessing element at specific index)
- **set(index, newValue)** (Changing an element at specific position of an arrayList)
- **remove(index)**
- **size()** (returns length/size)
- **contains()** (checks if element exists)
- **isEmpty()** (checks if ArrayList is empty or not)
