

1. During an exam, students can “draw” their topic using a topic number generator. Before the exam, the examiner specifies the number of topics and can enable or disable each topic to restrict its selection. At any given moment, only the non-restricted topics that have not yet been drawn by anyone are available for selection. When a student draws a topic, they start the generator, and when they stop it, it displays the number of one of the available topics. This topic then becomes unavailable for selection unless the examiner restores it to the pool of drawable topics.

As examiner		Description
Specifying the number of topics	GIVEN	The application is running.
	WHEN	The number of topics ($\mathbb{N}^+$) is entered.
	THEN	Topic numbers between 1 and the total number of topics are marked as "drawable."
Disabling the drawing of a specific topic number	GIVEN	The application is running, and the number of topics are specified.
	WHEN	One topic number (between 1 and the total number of topics) is selected.
	THEN	The selected topic number will be marked as "disabled."
Enabling the drawing of a specific topic number	GIVEN	The application is running, and the number of topics is specified.
	WHEN	The selection is removed from one of the disabled topic numbers.
	THEN	The specified topic number will be marked as "drawable."
Restoring a drawn topic back to the drawable pool	GIVEN	The application is running.
	WHEN	A "drawn" status topic number is provided.
	THEN	The provided topic number's status will be changed to "drawable."

As student		Description
Start random number generation	GIVEN	The application is running.
	WHEN	The random number generation is started.
	THEN	The "drawable" topic numbers alternate rapidly in random order on a display.
Stop random number generation	GIVEN	Random number generation is already running.
	WHEN	The random number generation is stopped.
	THEN	Topic number displayed at the moment of stopping is visible, status changes to "drawn."

2. In a motorcycle game, the player's task is to go as far as possible on the track with their motorcycle, avoiding obstacles. After starting a new game, they can steer the motorcycle left or right to avoid obstacles until they either crash into one or reach the goal.

As player		Description
New Game	GIVEN	The application is installed and running.
	WHEN	The user starts a new game.
	THEN	The motorcycle moves forward.
Left / Right	GIVEN	The motorcycle is moving forward.
	WHEN	The user presses the left/right arrow key.
	THEN	The motorcycle moves left/right.

As motorcycle		Description
Moving forward	GIVEN	The motorcycle has been started.
	WHEN	No intervention occurs.
	THEN	The top-down view of the motorcycle is visible in the center of the screen, and the road, including obstacles, moves backward at a constant speed.
Left / Right steering	GIVEN	The motorcycle is moving forward.
	WHEN	The user holds down the left/right steering key.
	THEN	While the motorcycle moves forward, it steers left/right as long as the key is held, but only up to the edge of the track.
Crash	GIVEN	The motorcycle is moving forward.
	WHEN	An obstacle appears on the track, moving toward the motorcycle's image, and the motorcycle runs into it.
	THEN	The motorcycle stops moving.
Finish	GIVEN	The motorcycle is moving forward.
	WHEN	The end of the track appears, moving toward the motorcycle's image, and the motorcycle gets to it.

3. The game of Battleship is played by two players. First, each player places their ships on their own grid board, which the other player cannot see. If a ship takes up more than one square, the squares it occupies must be connected, either horizontally or vertically, with no gaps between them. Then, the players take turns shooting at the opponent's board. After each shot, the other player responds, indicating whether a ship was hit or not, and if the hit ship has been sunk.

As player		Description
Arrangement	GIVEN	The application has started, the connection with the opponent has been established, the player sees their own empty board, and the ships they can place.
	WHEN	The player selects a ship and places it on the squares of the board.
	THEN	The newly placed ship is visible on the board.
Shoot	GIVEN	The application is running, the player sees the opponent's board alongside their own, including the squares they have previously shot at, and whether a ship part was hit on those squares, as well as if the connected ship parts make up a complete ship (i.e., the ship is sunk).
	WHEN	The player shoots at one of the opponent's squares.
	THEN	The target square's identifier is sent to the opponent, who provides feedback.
Report back	GIVEN	The application is running, the player sees the opponent's previous shots on their board, including those that hit a ship part.
	WHEN	The opponent shoots at a square on the player's board.
	THEN	If the targeted square is empty, the response will be "no hit"; if a ship part is on it, the response will be "hit"; if this ship part was the last undestroyed part of one of the opponent's ships, the response will be "hit, sunk."

4. In a hotel, guests can book a room in advance, but they can also take available rooms without a reservation. When they arrive, they can check in with the help of the receptionist. Upon departure, the receptionist checks them out and prepares the bill, which they need to pay.

As guest		Description
Booking (successful)	GIVEN	The desired date and room are specified.
	WHEN	The guest's booking request can be satisfied.
	THEN	The booking is made, and the guest is notified.
Booking (unsuccessful)	GIVEN	The desired date and room are specified.
	WHEN	The guest's booking request cannot be satisfied.
	THEN	No booking is made, and the guest is notified.
Payment (successful)	GIVEN	The guest wants to check out.
	WHEN	The bill for the services used at the hotel is prepared.
	THEN	The guest pays.

As receptionist		Description
Check-in (successful)	GIVEN	The guest wants accommodation.
	WHEN	They have a reservation or there is a free room.
	THEN	The guest receives their key and the hotel's usage information.
Check-in (unsuccessful)	GIVEN	The guest wants accommodation.
	WHEN	They have no reservation and there are no free rooms.
	THEN	The guest is politely turned away.
Check-out	GIVEN	The guest is staying at the hotel.
	WHEN	The guest wants to leave and pay.
	THEN	A bill is prepared, the guest pays, and the room becomes available.
