

In this test, you need to write the **name of the applied PoA(s), the reduction table, specification and algorithm** on paper.

There are 80 minutes available, **maximum 80 points** could be reached.

Don't forget to write your name, Neptun-code and group number on the paper!

During the test you are not allowed to talk (chat), to use cell phones, the internet, books, tutorials, ...

1. A teacher graded **n** of his students' tests and made notes about their performance. On the notes, you can find the name and point reached for each student. Determine whether everyone passed the test, if the passing grade is **k**.

Example input: n=8, k=50 Jerry 60 Emily 93 Mark 88 Jacob 51 Charlotte 29 Mia 18 Michael 100 Emma 79	Output: false
--	------------------

2. There was a flower picking competition in a kindergarten, **n** children competed, they could collect **m** types of flowers, and the nanny counted the number of each flower type that each child collected after the race. Give the index of the most common flower (biggest number) from all possibilities.

Example input: n=4, m=3	Output: 2																				
<table><tr><td></td><td>daisy</td><td>violet</td><td>dandelion</td></tr><tr><td>Bill</td><td>5</td><td>8</td><td>2</td></tr><tr><td>Katy</td><td>3</td><td>4</td><td>0</td></tr><tr><td>Aron</td><td>2</td><td>0</td><td>1</td></tr><tr><td>Sophie</td><td>7</td><td>5</td><td>3</td></tr></table>		daisy	violet	dandelion	Bill	5	8	2	Katy	3	4	0	Aron	2	0	1	Sophie	7	5	3	
	daisy	violet	dandelion																		
Bill	5	8	2																		
Katy	3	4	0																		
Aron	2	0	1																		
Sophie	7	5	3																		

3. We have a list of 2 siblings' first **n** words. Count the words they both said.

Example input: n=6 Bella: no, monkey, mom, snack, go, duck Gregory: dada, game, go, sleep, look, no	Output: 2
